Performance Report (Week 12) in IT 112: Web Systems and Technologies

2nd Semester A.Y 2025 - 2026

NEXUSWrites

"Your Tech, Your Story."

Group Name:

Powerpuffgals

Group Members:

Kris Ann B. Apoon

April Grace R. Dacanay

Ivy Angel R. Hidalgo

Princes Mae L. Mateo

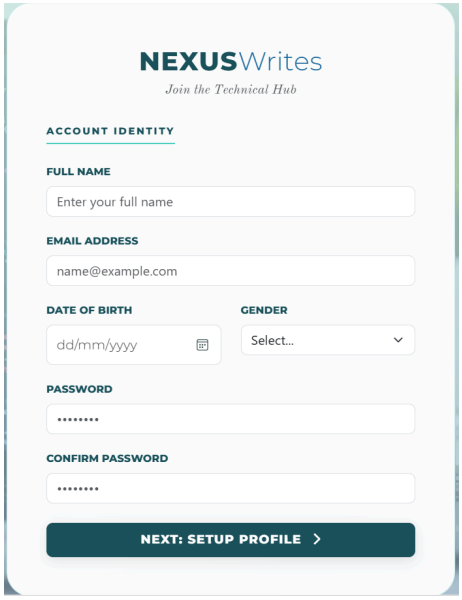
Milan R. Rellora

Course & Block:

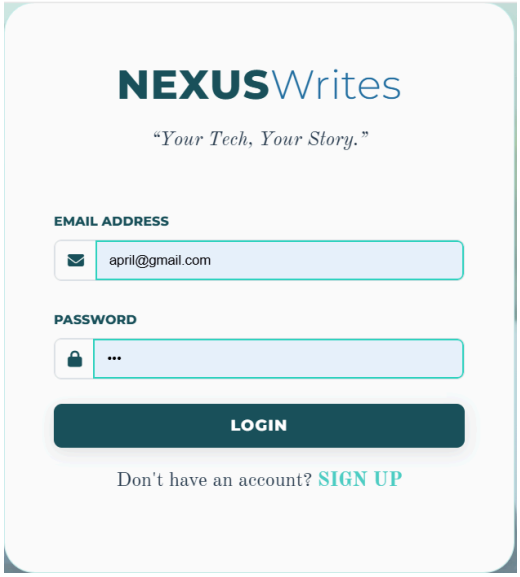
BSIT-2A

I. Frontend Pages Documentation

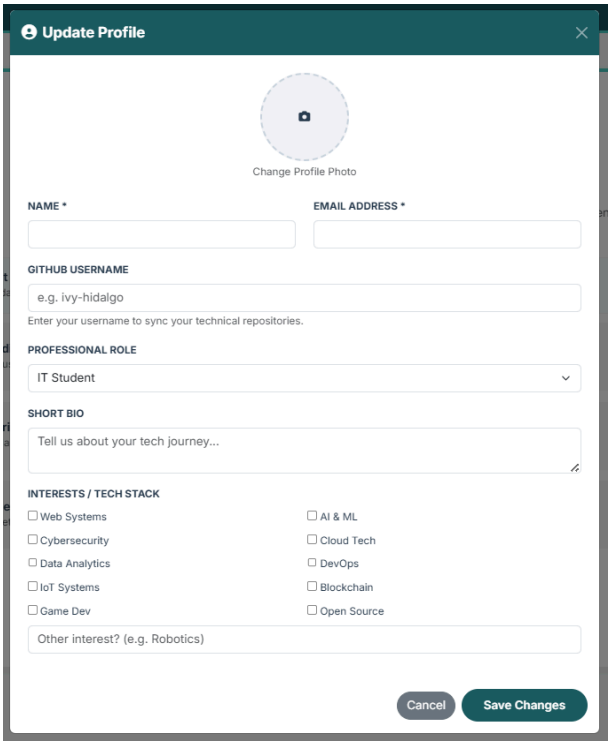
1) Register
-Shows user registration.



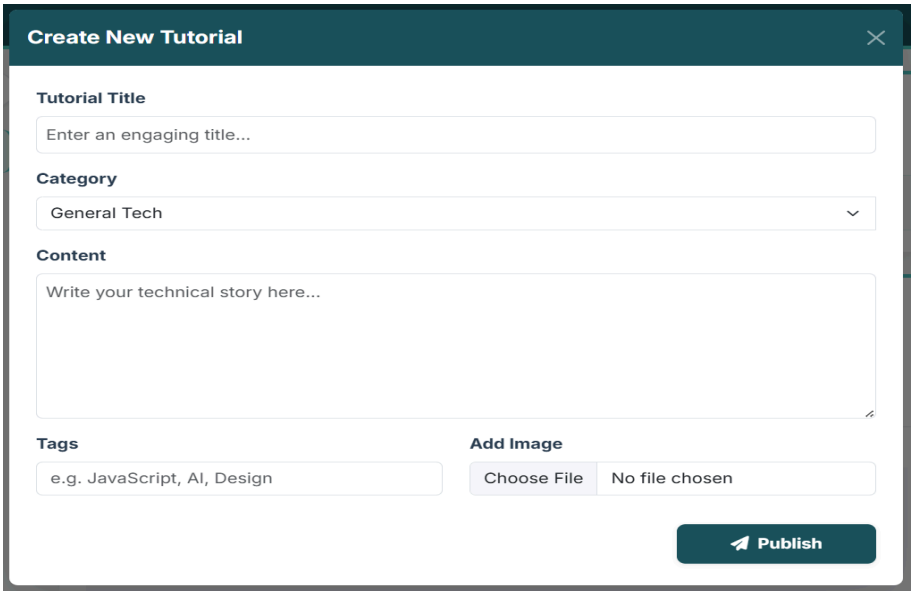
2) Login / Authentication
-Demonstrates the secure entry flow and required identity authentication.



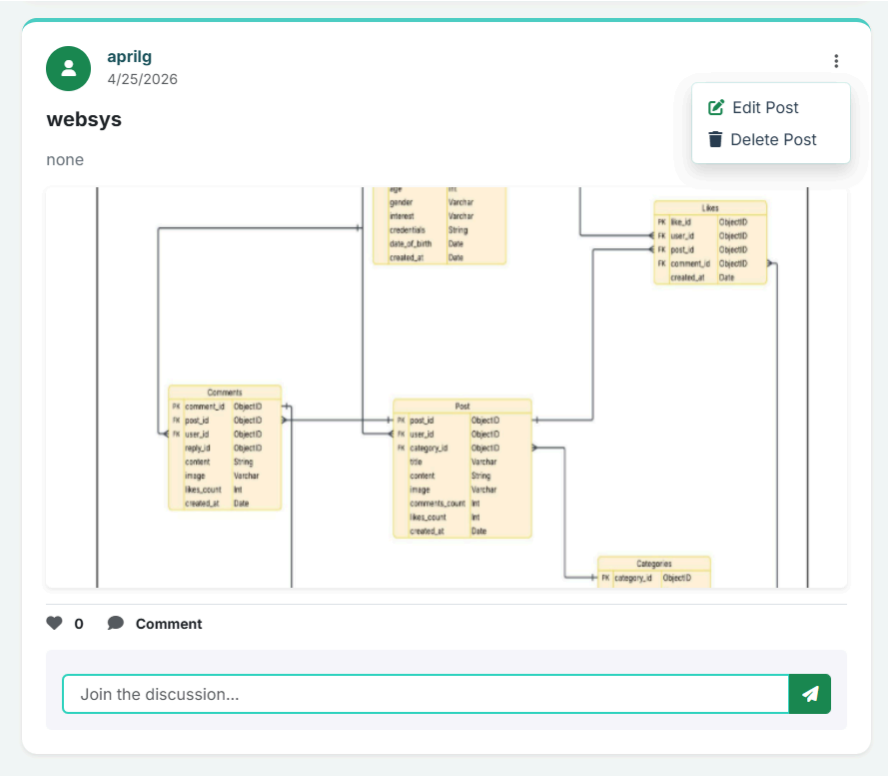
3) **Manage Profile / Update Profile Identity**
-Central hub for changing username, profile photo, credentials, and bio.



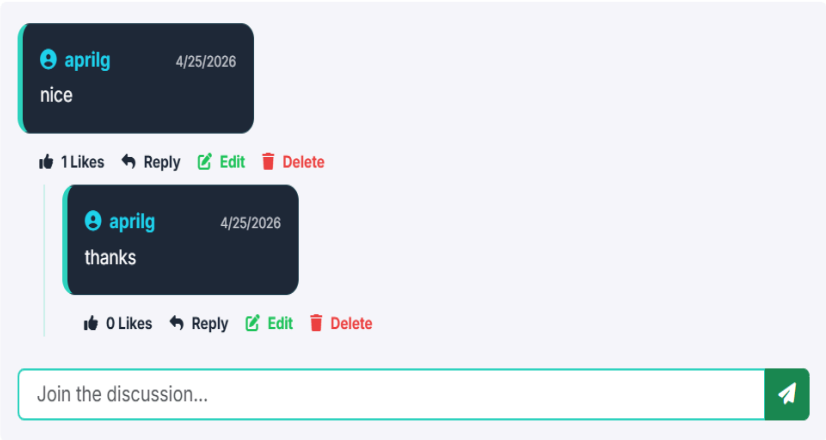
4) **Create Post / Add Image**
-Primary content creation tool with an optional image upload extension.



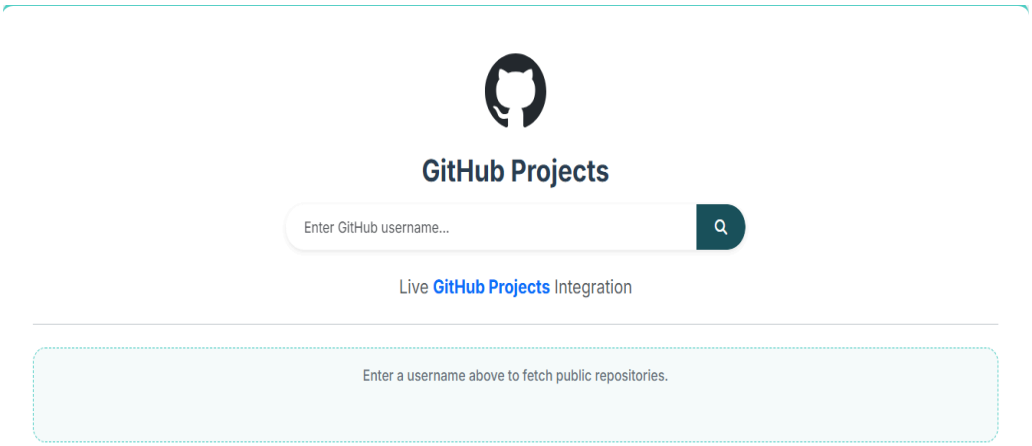
5) **Update Post / Delete Post**
-UI elements allowing users to modify or remove their published content.



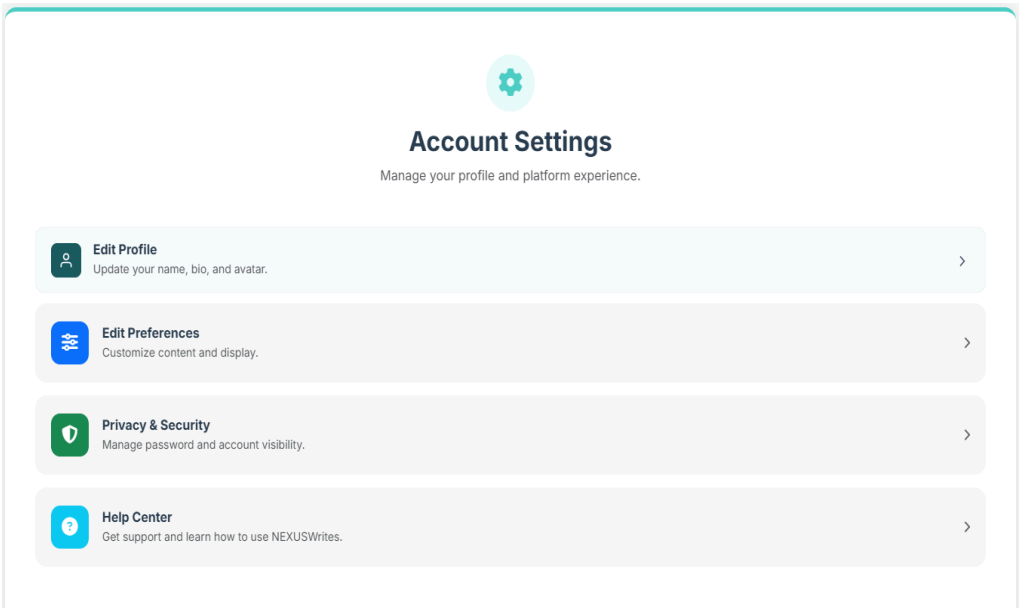
6) **Reply to Comment / Manage Comment**
-Interface for engaging with users and moderating feedback on posts.



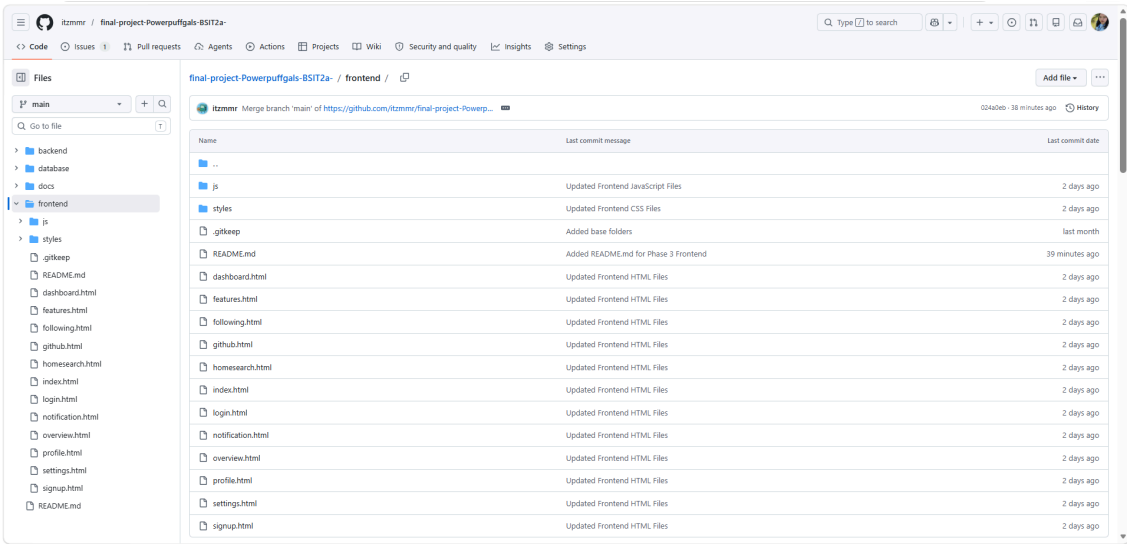
7) **Link GitHub Account**
-Shows the connection between the platform and the external GitHub actor.



8) **Manage Settings (Preferences, Help, Privacy)**
-Provides optional access to preferences, the help center, and security settings.



II. GitHub Folder Structure



III. Reflection

Ivy Angel Hidalgo (Project Manager & Backend Developer)

-In this phase, I focused on making sure our system is already working and aligned with the planned features. As a project manager, I monitored our progress and made sure everyone completed their assigned tasks on time. At the same time, I worked on improving the backend to support the frontend integration. This phase was more challenging because everything needed to function properly, but it helped me improve both my leadership and technical skills.

Kris Ann Apoon (Frontend Developer)

-This week I focused on turning our design documents into actual user-facing pages. I built the HTML, CSS, and Bootstrap templates, making sure they matched the ERD and use case. It was rewarding to see the system plan come to life, but the challenge was keeping everything consistent and responsive across different layouts.

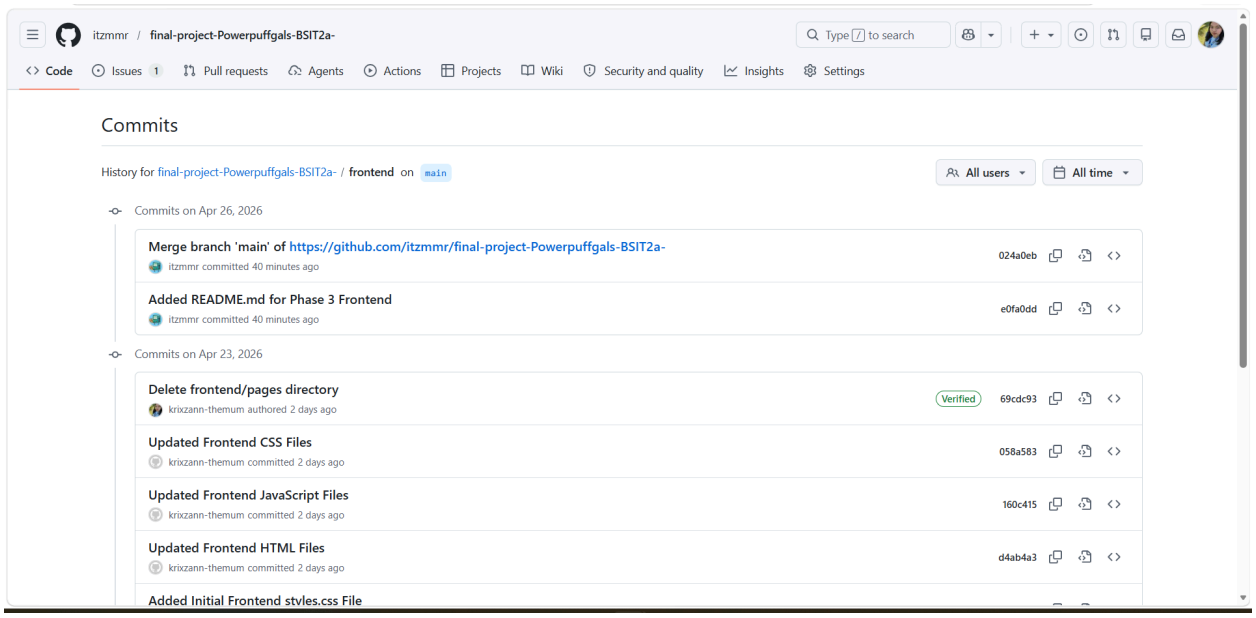
April Grace Dacanay (Documentation Officer)

-For phase 3, I documented all the working frontend pages and added annotations to show how each feature matches the use cases. I also organized screenshots clearly to make our report easy to understand. It took effort to ensure everything is complete. This phase helped me improve my attention to detail and understanding of the system as a whole.

Princes Mae Mateo (Database Manager)

-In this phase, I ensured that the database is properly connected and supports all the system features. I checked if the data is correctly stored and retrieved based on user actions. There were some adjustments needed but I learned how to fix issues efficiently. Phase 3 helped me better understand how the database interacts with both frontend and backend.

Milan Rellora (GitHub Manager)

-During phase 3, I made sure that all updates were properly committed and organized in our GitHub repository. I checked that the folder structure is clear and reflects our project progress. It was important to keep track of all changes and contributions. This phase helped me become more responsible in managing version control and teamwork.


IV. GitHub Commit History
